## **BMR 2005+ Mustang Ultimate Weight Savings Package**

Thonotosassa, FL - BMR Fabrication was the first to release lightweight tubular K-members for the new S197 Mustang chassis. Since the introduction of this chassis, BMR has continued to develop its line of lightweight racing components for this application. By sourcing additional related components from other leaders in the industry, BMR has developed a bolt-on kit designed for drag racing that shaves an unbelievable 94 pounds off the front end of the vehicle.

100 pounds off the nose of any drag race car is a dream come true. Less nose weight promotes better weight transfer, resulting in more consistent, predictable traction gains. On top of this benefit you get more header room, a cleaner engine bay and of course ET improvements from an overall lighter car. The new Mustang is already pushing 3500 lbs. Add any one of the popular supercharger or turbo kits available today and you're easily up another 100. This kit is the perfect diet plan to cancel out this weight gain.

*Kit components include:*

- BMR Tubular K-member
- BMR Tubular A-arms
- BMR Lightweight Radiator Support/Sway Bar Delete
- QA1 Adjustable Front Coil-over Struts
- QA1 Coil-overs
- QA1 Adjustable Camber Plates
- Strange Disc Brake Kit

Part# LW001
